

Turn OFF those nasty URLs

Posted by rdbartz - 2010/01/12 06:55

Hello Brian,

Just upgraded from 6.28 to latest, and STFP works right again plus some neat new features! Great piece of software...

I searched for how to turn OFF the url highlighting, but nothing seems available. I guess this is a feature request as such. For me, the highlighting is most disconcerting when I am working with certain logs.

PLEASE give us some way to turn it off, or if there is a way, please enlighten us. I would love to get rid of all that underlining and background highlighting.

Thanks,

Richard
